PROFILE

Backend and platform engineer with 11+ years of experience designing distributed systems and cloud services. Lead architecture reviews and technical decisions across reliability, scalability and cost. Experienced in high-throughput Node.js services, AWS infrastructure and production AI integrations.

EXPERIENCE & IMPACT

Condé Nast | Software Engineer III

2022 - Present

- **Newsletter platform:** Prototyped a Core API serving >200 RPS in a single 512 MB pod and used the results to align stakeholders on a simpler, more scalable architecture.
- Led design reviews and mentored engineers through a backend overhaul that simplified data flow and service responsibilities, reducing operating costs by nearly 50%.
- Built a consent scheduler for ~70 jobs/day of ~30K records from multiple sources and S3; optimized its runner to ~180 MB in a 512 MB pod. The platform supports 50M+ subscriber records; ~400 RPS was an observed production peak.
- Provisioned AWS infrastructure with Terraform and deployed services through GitHub Actions.
- Implemented a third-party MCP integration for the production newsletter subscription frontend and contributed to a chatbot.
- **Mobile backend:** Built a brand-agnostic Hapi service for The New Yorker iOS app and multi-brand RSS feeds, plus app notification preferences using SQS, MongoDB, and Kafka.

Condé Nast | Software Engineer II

2019 - 2022

- Built a Handlebars library for The New Yorker flagship newsletters and extended Copilot CMS to support it; the library remains in use.
- Shipped React and Next.js changes and Cypress tests in a publishing monorepo serving roughly 40 Condé Nast brands.

Synamedia | Senior Software Engineer

2018 - 2019

- Built OpsHub Console features spanning reusable microfrontends, backend changes, tests, and deployments.

OpenText | Software Engineer

2014 - 2018

- Developed enterprise applications with Java, AngularJS, and MySQL across frontend and backend.

TECHNICAL DEPTH

Architecture: system design, distributed systems, high-throughput APIs, event-driven workflows, queueing

Applied AI: production MCP frontend integration, chatbot feature development

Backend & data: Node.js, JavaScript, TypeScript, Go, Hapi, Express, REST, GraphQL, MongoDB, Redis, SQL, Kafka / Confluent

Cloud & delivery: AWS (SQS, SNS, Lambda, EC2, S3, IAM), Terraform, GitHub Actions, Kubernetes

EDUCATION

M.E., Computer Science - University Visvesvaraya College of Engineering (UVCE), 2013 - 2015

B.E., Information Science - Channabasaveswara Institute of Technology, 2009 - 2013
